

Rayyan Tubaishat

Full Stack Developer

ba8lawawa2023@gmail.com | +962 7 9594 5090 | Jordan | tubaishat.com

Summary

Full Stack Developer with 3+ years of experience building web applications end-to-end using PHP, Node.js, JavaScript, TypeScript, and MySQL. Take applications from initial design through production deployment with a focus on clean code, performance, and Linux server operations.

Experience

EZ-AD TV, Inc. May 2025 - Present
Full Stack Developer Remote

- Design and build full systems from the ground up, including subscription billing, payment processing (Stripe), admin dashboards, and client-facing portals.
- Own and maintain internal company platforms used daily by employees, handling feature requests, bug fixes, and improvements.
- Integrate AI services into production workflows for automated content generation, document processing, and intelligent automation.
- Build multilingual automated publishing pipelines and data-driven reporting tools.
- Develop financial reconciliation systems with third-party accounting API integrations.
- Create data pipelines connecting external APIs (Google Search Console, Slack, Google Cloud Storage) to internal platforms.
- Manage full deployment lifecycle including server configuration, database migrations, and production monitoring.

UGC-Gaming.NET January 2023 - May 2025
Full Stack Developer Remote

- Developed and maintained internal tools and systems, enhancing efficiency across all departments.
- Built a complete staff area system from scratch, improving task management and operational workflow.
- Managed server infrastructure including server configuration, SSL certificates, and DNS handling with automated deployments.
- Modernized company websites with clean code following MVC patterns, resulting in 40% improved performance.
- Led technical team implementing agile methodologies for smooth project delivery.

Education

Al al-Bayt University 2022 - 2026 (Expected)
Bachelor of Computer Information Systems

Technical Skills

Languages PHP, JavaScript, TypeScript, SQL
Frontend HTML, CSS, Tailwind CSS, React
Backend Node.js, MySQL, REST APIs
Tools Git, Composer, Linux

Projects

RealTime Call Management System **Node.js, TypeScript, Fastify**
Real-time incoming call management system for customer service operations. Web-based platform enabling agents to receive, accept, or decline incoming calls directly through the browser interface, streamlining workflows and eliminating the need for traditional phone hardware.

Languages

Arabic Native **English** Professional proficiency
